

UITableViewController

```
classDiagram
    class UITableViewController
    class TripsViewController {
        + tripToPass
    }
    UITableViewController <|-- TripsViewController
```

The diagram consists of two class boxes. The top box, representing the base class, is titled 'UITableViewController' and has two empty rectangular compartments below the title. The bottom box, representing the subclass, is titled 'TripsViewController' and has two compartments below the title; the first contains the text '+ tripToPass' and the second is empty. A blue line with an open triangular arrowhead points from the top of the 'TripsViewController' box to the bottom of the 'UITableViewController' box, indicating a generalization relationship.

TripsViewController

+ tripToPass
